Basic configuration

Easy to transport in a motor car trailer. Assembly can be performed without heavy lifting equipment.

About a climbing simulator

Operating principle:

Infinite belt rotation with grips and reliefs.

Manual control:

Smooth rotating speed adjusting and tilt angle change from $+15^{\circ}$ to -49° with a stationary control panel and remote control.

Safety:

Soft mat and automatic stop allow rock climbing without injuries or fear of heights. No risk and no fear. The climbing is totally safe with the soft mat at the base and absence of automatic belays.

About simulator

Process:

If the training person climbs quickly, the rotation speed will automatically increase. And if a person stops, the surface first slows down the movement and then stops to give him time to think about his next step. All this is provided by a number of sensors and smart automation.

Additionally:

Highlighting of the grips and reliefs, possibility to choose the color of the simulator or print any image on the working cloth or mate, prepare the equipment for use near the pool or open space, the route indication board in real time, adapt the software for your tasks and much more.

Contact us and we will arrange this!
